## WHAT IS MOTOR SILK/BORON CLS BOND™?

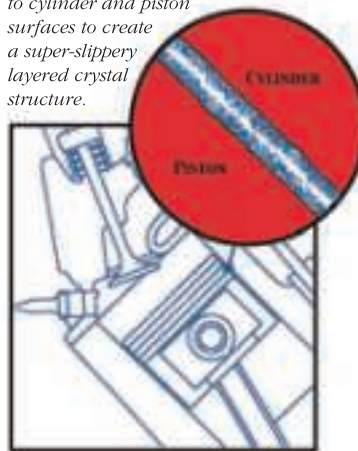

Motor Silk is a unique biodegradable engine lubrication so revolutionary, it's patented.

The **Boron CLS Bond™** (Crystal Lattice Structure) is one of the lowest friction lubricants known. This technology was developed at the Argonne National Laboratory in Chicago, Illinois for the U.S. Department of Energy.

## HOW DOES IT ACTUALLY WORK?

The active boron compound found in **Motor Silk™** actually bonds to metal surfaces found in your major drive components by chemically reacting with metal surfaces to create a nearly permanent self-replenishing, boundary-layer lubricant on metal surfaces.

*Microscopic boron particles permanently bond to cylinder and piston surfaces to create a super-slippery layered crystal structure.*

## MECHANICAL PROTECTION

### Parts Covered

**Engine:** All internally lubricated engine parts including: pistons, piston rings and pins, crankshaft and main bearings, connecting rods and rod bearings, camshaft and bearings, oil pump, timing chain, gears, rocker arms, valves, valve springs, seats and guides, valve pushrods. The engine block, cylinder head and rotary housing are covered only if damaged by an internally lubricated part. Seals and gaskets are covered when replaced in conjunction with covered repairs.

**Transmission:** All internally lubricated parts in the transmission case and torque converter. The transmission case is covered only when damaged by an internally lubricated part.

**Differential:** All internal lubricated parts including carrier case, gear sets, bearings, bushings, axle shafts, limited slip clutchpack, axle shafts. The differential housing is covered only if damaged by a covered component.

**4x4:** Transfer Case - included
